

Young Aviator Update

November 2015

The group was split into two groups for October's work session on the 3rd. The first group spent the day shining up the B-25 so that it would be ready for the next weekend. The 2nd group worked on making sense of the McHangar. They sorted bolts, built shelving, organized tools, swept the floors.... The place was a real disaster!

On October 10-11, we took the B-25 to Loveland for the NoCo Mini Maker Faire. As always, it was a hit with the kids and adults alike. Thank you to the Young Aviators, mentors, and parents who volunteered!

The B-25 will have its last voyage of 2015 on Veteran's Day. We were invited to bring it as a float to the Veteran's Day Parade in Longmont. The kids are going to be able to ride with their project. What an honor to participate in a parade on Veteran's Day. After the parade, we will tuck it safely away in the winter hangar.

Work is scheduled to resume on the B-25 after the new year. There is a wish list of things that we are hoping to have completed before Oshkosh 2016.

In November, we are visiting Sierra Nevada's space systems facility. Still awaiting final details!

"The Space Systems (SS) Business Area of Sierra Nevada Corporation develops high performance, innovative components and systems that are changing how we reach, explore, and utilize space. SNC's Space Systems products innovate, enable and perform."
